Case Study

Topic : TripAdvisor Web Application Home Page Interface

Name: Harsha J. Burade

Roll no:- DWP – 24 / AIML – 05

Branch:- CSE(AIML)

Registartion No.:- 24070585

Course Name:- Dynamic Web Programming (MDM2IT302)

---

1. Introduction

This project is a simplified clone of the Tripadvisor homepage created using HTML, CSS, and basic JavaScript. The website helps users explore travel destinations, activities, and interests through a clean and user-friendly interface.

The homepage is designed to display travel-related content such as destinations, categories, and a search feature to make browsing easier for users.

---

2. Objective of the Project

The main objectives of this project are:

- To design a travel website homepage similar to Tripadvisor
- To display travel destinations and categories clearly
- To provide a simple search interface for users
- To improve UI/UX design skills using frontend technologies

This project focuses on layout design and user interface rather than real-time data or advanced recommendation algorithms.

3. Website Reference

https://www.tripadvisor.com/

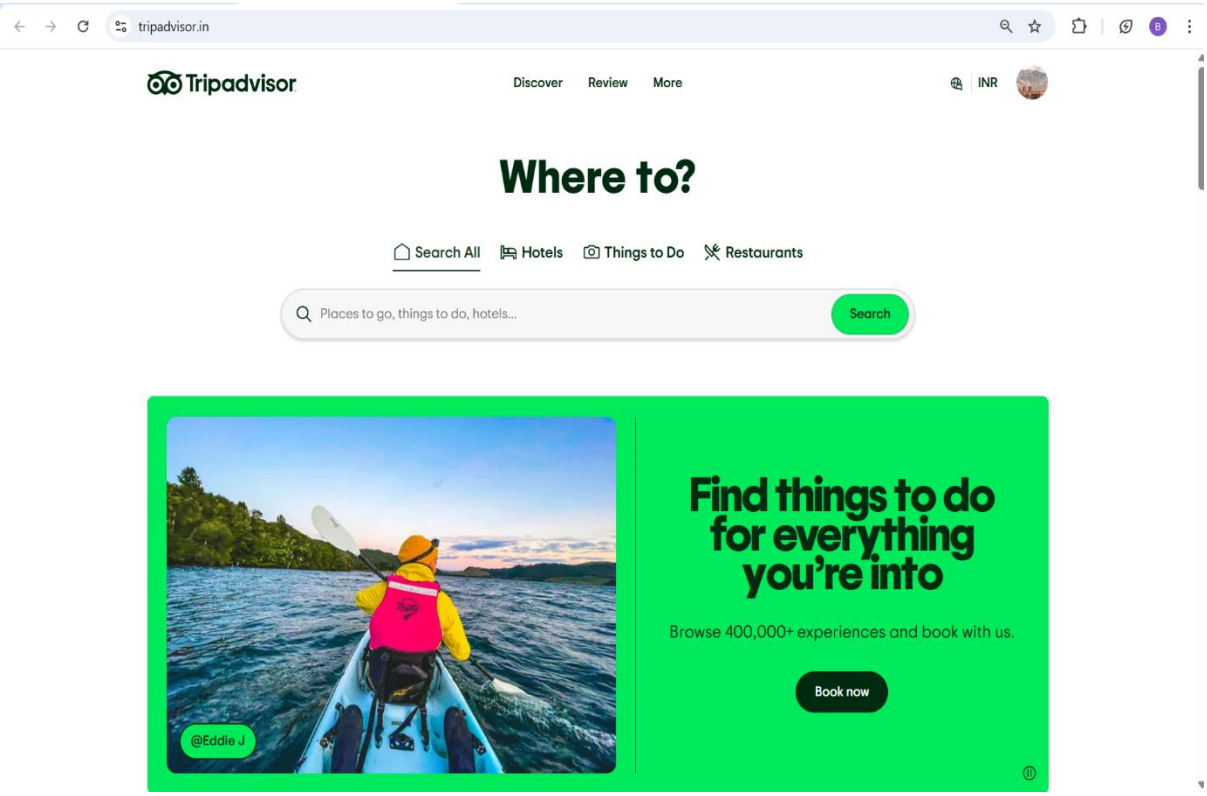
---

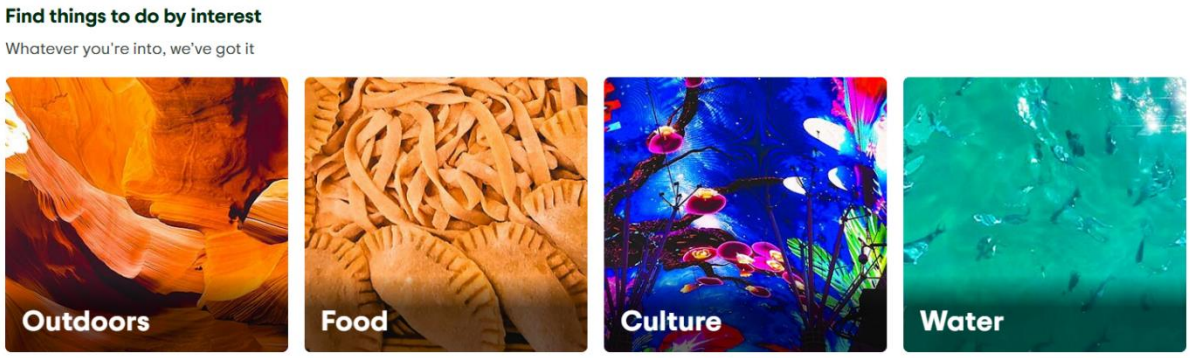
4. Selected Interface

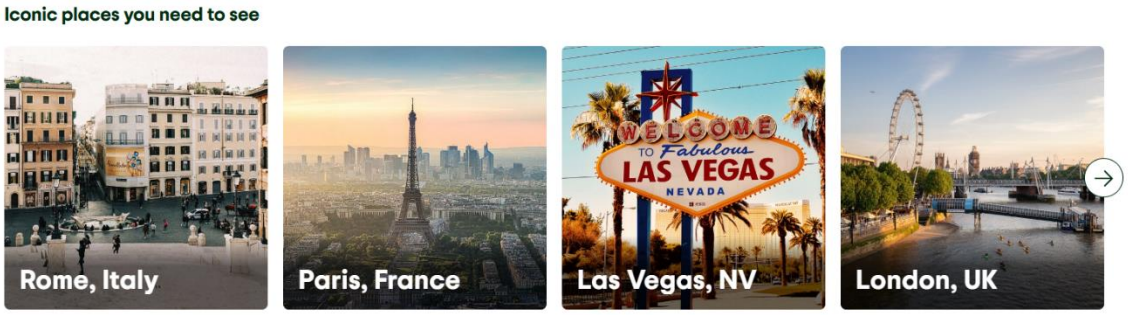
The selected interface is a Tripadvisor-style homepage interface for exploring travel destinations and activities.

---

5. Reference Interface Image







---

6. Features of the Homepage

6.1 Top Header

The header includes the website name (Tripadvisor) and menu options like Discover, Review, and More. It provides basic navigation for users.

6.2 Navigation Bar

The navigation bar contains options such as:

- Search All
- Hotels
- Things to Do
- Restaurants

It helps users quickly switch between different travel categories.

6.3 Search Interface

A large search bar is placed below the navigation menu. Users can type places, hotels, or activities they want to explore.

6.4 Hero Section

The hero section includes:

- A large travel image
- A short description
- A “Book Now” button

This section highlights featured travel experiences.

6.5 Find Things to Do by Interest

This section displays categories such as:

- Outdoors
- Food
- Culture
- Adventure

It helps users explore activities based on their interests.

6.6 Popular Destinations Section

This section shows destinations like Goa, Manali, and Jaipur with images and short descriptions.

---

7. How the System Works

This is a static frontend project, so it does not use real recommendation algorithms.

Instead:

- Content is manually added
- Images are displayed using predefined data
- JavaScript can be used for simple interactions (like button clicks or alerts)

---

8. Tools and Technologies Used

- HTML5 – Structure of the webpage
- CSS3 – Styling and layout design
- JavaScript – Basic interactivity
- Images (Unsplash) – For realistic travel visuals

---

10. Conclusion

This project demonstrates how a travel website homepage like Tripadvisor can be designed using basic frontend technologies. Although it does not include real-time data or advanced recommendation systems, it successfully replicates the layout and user interface.

The project helps in understanding website structure, layout design, and user experience, making it a good foundation for building more advanced web applications in the future.
